Message from the Guest Editors

Dear Colleagues,

In the last centuries, the study of sea-level changes along the world's shores has been a primary scientific focus in climate change studies, but also for scientists that would explore past landscape evolution, geomorphological processes, human impacts, and system responses. The relative variation in the sea level derives from the sum of global, regional, and local processes. All these processes are spatially and temporally variable and cause complex sea-level changes at both regional and local scales. A multidisciplinary approach addressed to palaeo-sea-level reconstructions at regional and local scales is the best method to understand the role of natural and anthropogenic forcing in the landscape evolution, as well as to discover the past human adaptations to natural modifications of the landscape. Recently, the integration between geo-acoustic and optical indirect methods has allowed for the high-resolution mapping of wide coastal areas and seabed morphologies by combining remote and direct data.

Message from the Editor-in-Chief

The relevance of water in human development and sustaining life, fuels general and scholarly interest in the world's water resources. A better understanding of all aspects of water and its relation to food supply, energy production, human health, and the functioning of ecosystems is key in managing this precious resource in a sustainable, efficient and equitable manner. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the **Science Citation Index Expanded** (Web of Science), Ei Compendex and other databases.

CiteScore 2017 (Scopus): **2.06**, which equals rank 43/191 (Q1) in the category 'Water Science and Technology' and 51/199 (Q2) in 'Aquatic Science'.
