Deadline for manuscript  
submissions:

**31 March 2021**

### Message from the Guest Editors

Sea level rise is one of the major consequences of climate change, and it is already affecting coastal communities and ecosystems around the world. However, the current rate of sea-level rise is not the same everywhere. The melting of continental ice sheets and glaciers is a prime driver of sea-level rise over century to millennia time scales. Glacial and hydro-isostatic adjustment (GIA) is a combination of physical processes that regulate the deformation of the solid earth and of the geoid in response to surface ice and water loading variations. Hence, GIA contributes to the strong regional variability of ice-driven mean and relative sea-level (RSL) change. Vertical tectonic movements and mantle dynamic topography also contribute to increase the variability of RSL change in space and time. Furthermore, a strong contributor to regional sea-level variability also on much shorter time scales is thermal expansion in temperate sea, caused by density changes due to temperature increase.

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed by the [Science Citation Index Expanded](#) (Web of Science), [Ei Compendex](#) and [other databases](#).

**CiteScore** (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology', rank 32/201 (Q1) in 'Aquatic Science' and rank 70/628 (Q1) in 'Geography, Planning and Development'.
